

Liquid Galaxy can be used for elderly entertainment in the following ways-

1] We can use Liquid Galaxy for elderly people who live far away from their children. We can have them video chat in a panoramic screen with multiple people so that they do not feel alone.

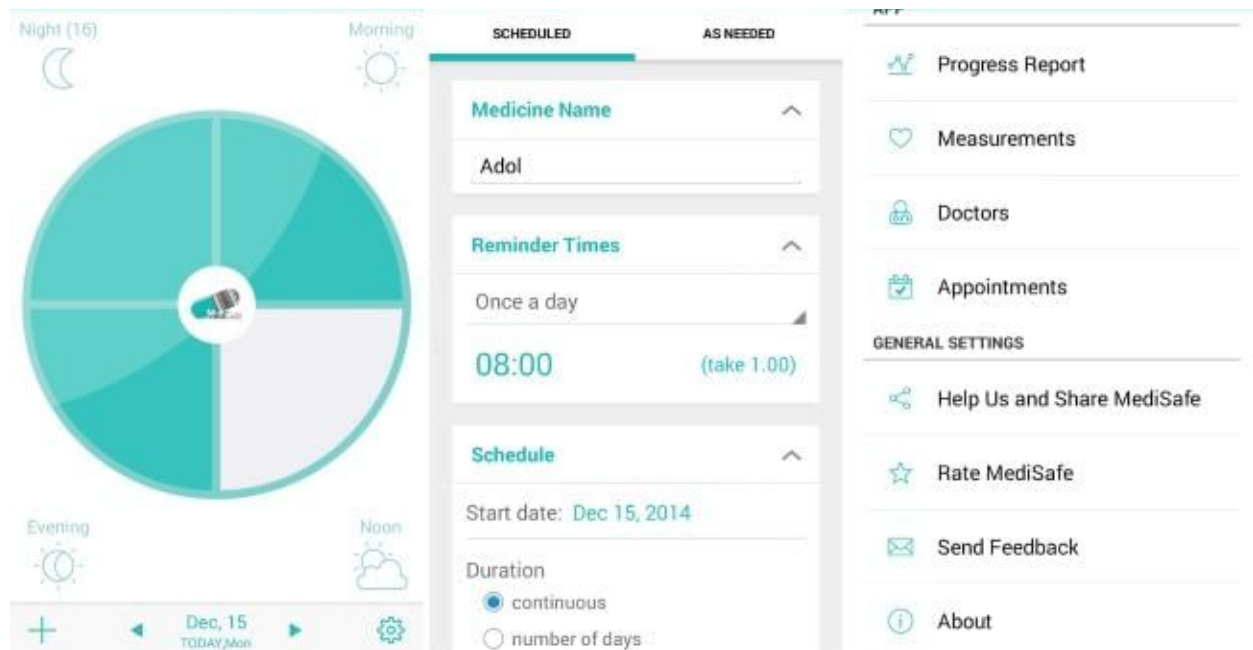

2] We can use Liquid Galaxy to suggest them some exercise videos from time to time for those people who cannot go out of their homes.

3] We can use Liquid Galaxy to take them to a virtual tour to the places where they cannot visit due to their old age

4] Whenever they are using Liquid Galaxy, we can make an app which reminds them from time to time whenever they have to take their medicines. It would look something similar to this

5] Liquid Galaxy can be used by them to watch their favourite movies, songs etc. with the help of a voice assistant since most of the elderly people are not tech savvy and do not know how to control it.

6] We can use Liquid Galaxy to show them a sequence of their memories in the form of photos, videos etc. in a panoramic vision so that they can remember their good old days.

7] We can make them wear a fitness band and connect the band with Liquid Galaxy so that they can keep a track on their fitness and can also alert them if something is wrong.
