

Liquid Galaxy can be used in museums for a wide range of purposes-

1] We can create animated cad models of the historic items and make people view them from every angle. Since people are not allowed to touch them they can get the experience of the real thing-

2] We can make cad models of historic places that have been either in very bad condition or have become extinct in today's world. We can make people see how those places looked like when they were in great condition in the past. It would be a great experience for people as they can really get the experience of time travel.

3] We can create a timeline of a huge timeline of a particular historic item in a panoramic mode. This time line would contain details about how its use, shape, size, significance etc. had changed over time.

4] We can create interactive maps about any particular dynasty and would tell about how its rulers, wars fought, areas conquered have changed over the time. It would be an amazing experience in a panoramic mode.

5] We can use Liquid Galaxy to create animations of animals that had gone extinct today like Dodo bird, Dinosaurs etc.
